

Ahraz Shamim

Technical Product Manager

Delhi, India | +91-6395152985 | shamimahraz@gmail.com | linkedin.com/in/ahraz-shamim

PROFESSIONAL SUMMARY

Technical Product Manager and hands-on builder with 2+ years creating IoT and SaaS products across the EV, two-wheeler, and battery/BMS ecosystem. Owns roadmaps, PRDs, RICE prioritization, and a ₹40L/month P&L while personally writing firmware, embedded C, and AI-driven 0→1 prototypes. Compressed multi-customer delivery turnaround from weeks to days and elevated product KPIs across a growing OEM portfolio. Pairs deep product-and-engineering command with applied AI (LLMs, RAG, prompt engineering) to prototype fast and validate ideas quickly—a product manager who builds first.

CORE SKILLS

- **Product Management:** Roadmapping, PRDs & User Stories (EARS syntax), RICE Prioritization, GTM Strategy, P&L Ownership, User Research, Wireframing (Figma), A/B Testing, UAT, 0→1
- **Delivery & Methodologies:** Agile/Scrum, JIRA, Confluence, Git, SQL, Gantt Charts, Sprint Planning, SDLC, DFMEA, TARA, AUTOSAR/MISRA
- **Technical:** Python, C, MATLAB, Embedded Systems, IoT Architectures, EV/BMS, BLE, GNSS/Geolocation, IMU Analytics, FOTA, API Integration
- **Applied AI:** LLMs, RAG, Embeddings/Retrieval, Prompt Engineering, AI Agents & Workflows (n8n), AI-Driven Prototyping
- **Leadership:** Cross-Functional Leadership, Stakeholder Management, Conflict Resolution, Data-Driven Decision Making

PROFESSIONAL EXPERIENCE

Product Solutions Engineer (Technical Product Manager) | Vecmocon Technologies
Delhi, India

Jan 2024 – Present

- Directed end-to-end delivery for 5+ enterprise customers including TATA AutoComp Systems, prioritizing the roadmap via RICE and optimizing VIM (Vehicle Intelligence Module) architectures to compress turnaround from 2 weeks to 3 days and lift KPIs/OKRs by 78%.
- Championed the IoT line as product proxy, authoring PRDs and user stories in EARS syntax and shipping 0→1 POCs with AI at 100% stakeholder alignment and measurable product-market fit.
- Instituted P&L tracking across a ₹40L/month IoT line, surfacing cost, margin, and revenue visibility to guide data-backed decisions.
- Programmed across Python, C, MATLAB, SQL, and embedded systems over the full SDLC, bridging complex hardware engineering with business goals.
- Orchestrated Scrum ceremonies in JIRA and Confluence and steered DFMEA and TARA analysis, embedding automotive functional-safety and cybersecurity rigor into releases.

Mitacs Global Research Intern | University of Prince Edward Island
Prince Edward Island, Canada

Jun 2023 – Aug 2023

- Modeled conversion of 50+ transit buses to electric in MATLAB/Simulink alongside an international research team, cutting fleet GHG emissions by up to 80–100%.
- Presented electrification strategies to city planners that influenced \$2M+ in pilot investments.

KEY PRODUCTS & FEATURES SHIPPED

- **Motion-Aware Anti-Theft Layer:** Engineered interrupt-driven IMU firmware and defined the detection spec for an instant, no-app tamper response (alarm plus wheel-lock), tuning thresholds to slash false alarms while preserving security.
- **BLE Secure Remote-Control App:** Architected keyless lock, unlock, and ignition over an authenticated, encrypted Bluetooth Low Energy channel spanning 2 hardware variants (BLE 4.2 and 5.3 Coded PHY, ~4× range).
- **Multi-Source Geolocation System:** Authored the geolocation PRD in EARS syntax across 3 radio sources (GNSS, cellular, WiFi) with a firmware/backend split, capability-aware graceful degradation, and a risk and failure-mode matrix for cross-team dependency management.
- **Harsh-Braking, Crash & Driver-Behavior Analytics:** Developed IMU sensor-fusion detection that converts raw signals into customer-facing safety scoring and telematics and insurance use cases.
- **Mass FOTA Automation Dashboard:** Automated CSV-driven firmware updates across the device fleet with per-device status tracking, removing manual rollouts and accelerating releases.
- **IoT Firmware Test Suite:** Built comprehensive coverage of 5000+ cases validating every customer-facing capability, improving release reliability and reducing field issues.

PROJECTS

SAFNECT Smart Healthcare Platform (Founder) *Jan 2025 – Present*

- Founded SAFNECT and shaped the roadmap from ideation, assembling a cross-functional team, running market research, and crafting the vision and PRD with RICE scoring.
- Scaled a healthcare MVP through the full SDLC and 5 pilot launches, raising operational efficiency by 50% via KPI tracking and feedback-driven go-to-market refinement.

Modular Battery Swapping Station *Nov 2024 – Jan 2025*

- Spearheaded new-product development of an AUTOSAR-compliant modular battery-swap MVP, delivering 6 pilot units for client field testing.
- Implemented swap sequencing, door-lock/actuator control, and SoC/UI display through model-based design in MATLAB/Simulink/Stateflow with MISRA-compliant Embedded C.

Effi-Cycle Hybrid Electric Vehicle, TGW ZHCET (Team Lead) *Nov 2020 – Dec 2022*

- Prototyped an award-winning EV featuring path braking, parking assistance, energy regeneration, and drowsiness detection, contributing to a 30% reduction in parking accidents.
- Secured ₹2.5 Lakh in sponsorship funding and guided the team to deliver the prototype.

EDUCATION

B.Tech in Electrical Engineering | Aligarh Muslim University (ZHCET) *Aug 2020 – May 2024*
